Ibrahim Mercado CEO / FOUNDER

Global E-Sports Stats .

Overview

Provide gamers help on keeping up with their friends or competitors on the latest stats depending by games and or console. Since gaming has had a rise in the Sport community some players would like to see stats from their favorite games to see how they should be playing . That's were Global E-Sports Stats comes in with a wide variety of games and many more coming soon.

Goals

1. Load data from each games API's and display to user what they requested.
2. Clean UI/UX look.
3. Display News thru IGN

4. Display stats from games from their respective slots.

Specifications

All game stats are up to date with our apis and more games will be available with the updates that will be available after choosing the console of choosing and games. You will also get news pulled from IGN news. Many more other updates will be hinted for time constraint.

Milestones

I. Display Updates and Stats from API

Showing updates and stats from the games API and be able to be modified or styled.

II. Display News from IGN.

Have a stylish look for the news pulled from IGN for user pleasure.

III. Have a successful clean authentication process and stored on server

All of the user login info will be stored on Mysql for next use

Step by step app function

IV. Display signup box

User will have the ability to sign up thru google or by the page itself and the info will be stored in mysql.

V. Login Authentication

User will have the ability to sign up thru google or by the page itself and the info will be stored in mysql.

VI. After signing up the page will redirect to main html.

After the info is submitted the page will redirect to the main html where they can begin their search

VII. After redirect can navigate and click on the different nav buttons which views stats

The user can then navigate different the top dropdown menus from different consoles and after clicking different games that show their stats will pop down.

VIII. Also user would be able to get certain news from IGN News that the user can access on the News tab

After clicking the user will be redirected to a IGN News pull site where the user if they please can access IGN News for other articles if they choose

IX. Also Main html will include a clean image of the company and a brief description of its purpose

The Description will talk about our purpose with esports game stats and provide the user with instructions on what to do and how to use the site

X. Playstation button in main html after being clicked will drop down games available to show stats

After the user clicks the game chosen it's gonna be redirected to the game chosen by the user

XI. Xbox button in main html will do the same as Playstations button clicked will drop down games available to show stats

After the user clicks the game chosen its gonna be redirected to the game selected by the user

XII. In login page user will be able to restart a their account by clicking Forgot My Password

After the user clicks Forgot My Password they will re type their info and they will re gain access to their account and will be able to search as they please

XIII. IGN News

User will be showed headlines of the news and if the user clicks it , they will be redirected to main original news site

XIV. User will get behind the scenes access to a little message from the Developer

User can click the about me button located in the footer section in all pages
